## WHAT IS SPECIAL ABOUT THE 210F FILTERED TRACING PROBE?

*The Pro210F tone tracing probe may have a conical shape like its predecessor the Pro210, but this electronic tone finder has been improved in some important ways. The Pro210F tone tracing probe is a hand-held, noise-resistant non-contact receiver designed to identify wires and cables that have a tracing tone on them. Used in Armada Technologies testing kits Pro48K, Pro50K, and Pro220K, the Pro210F allows users to follow the tone generated by the testers.*

### Notable improvements in this latest model:

- High sensitivity metal-core tip
  - Continuous rolling volume control
  - Sealed, tactile-feel control button
  - Selectable Normal and Filtered modes
  - Bright headlight that comes on with the receiver
- 
- Super long life (250 hours) using AA batteries instead of 9 V
  - LED indicators for Signal Detect, Noise Reject and Low Battery
  - Large loudspeaker
  - Headset jack 3.5 mm
  - Compatible with all commonly used tone senders
